

CEREBRUM Automation And Telemetry Platform

APPLICATION EXAMPLES

CEREBRUM Automation Platform

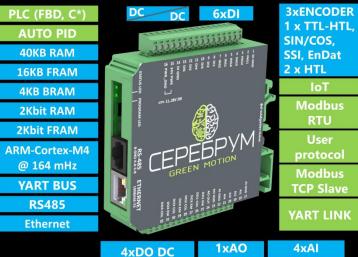

YART 1.8

The CEREBRUM controllers are designed to build high-tech control systems, manage monitoring and telemetry engineering systems and machines

GREEN MOTION

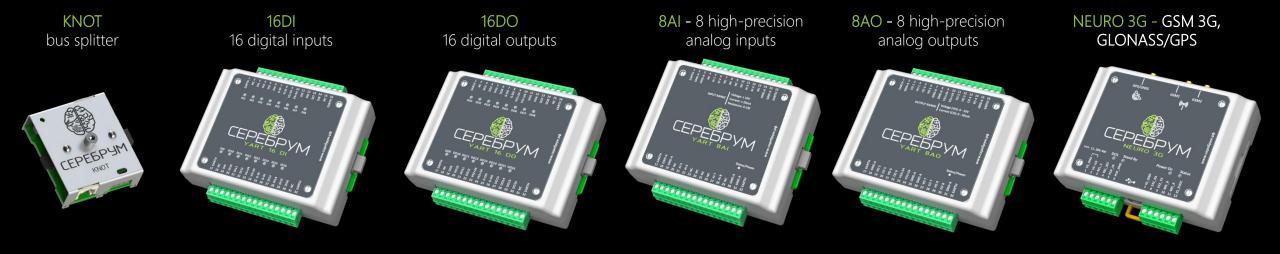

4xDO DC optotransistor PWM

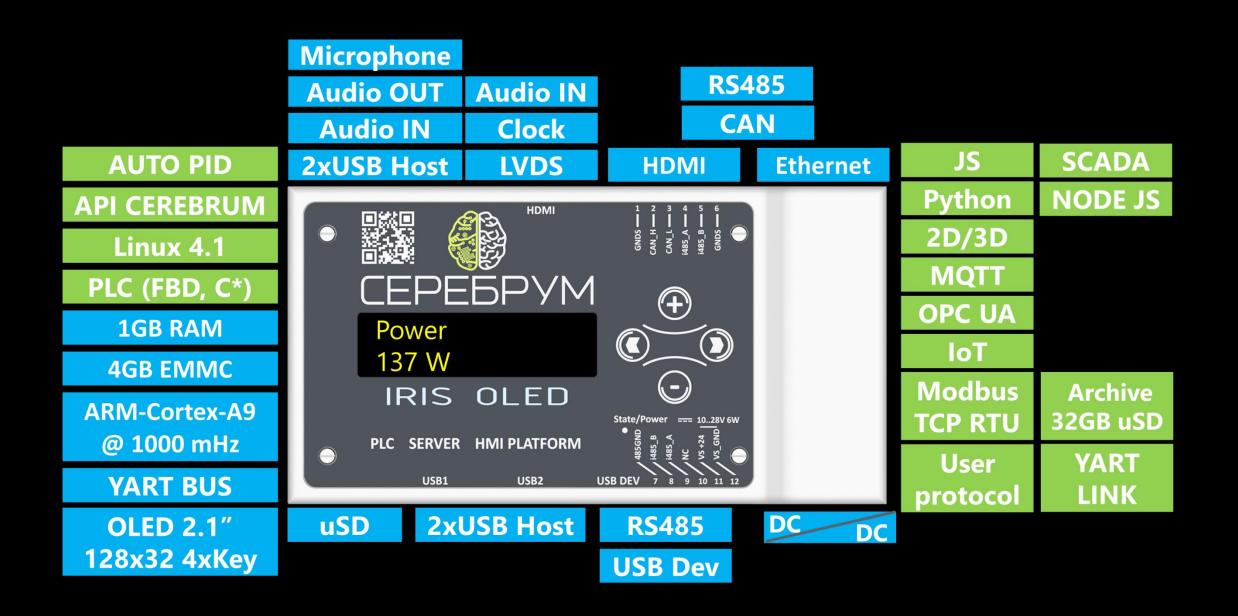

1xAO U 0-10V I 0-20mA

4xAI U 0-10V I 0-20mA

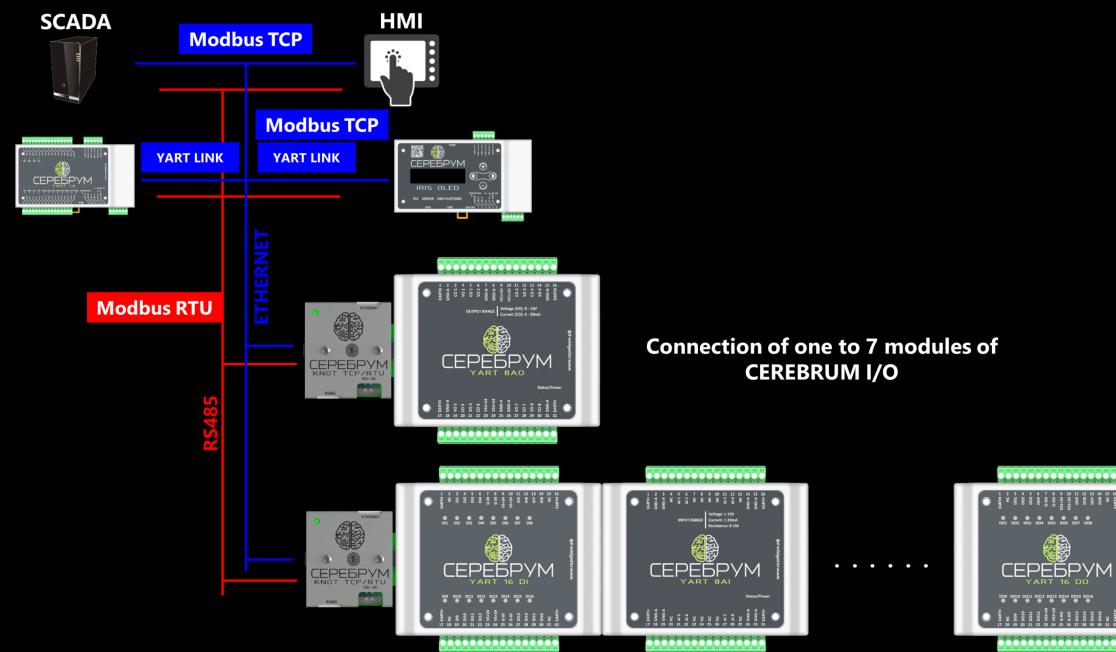

Universal Input/Output Expansion Units And Communication Modules

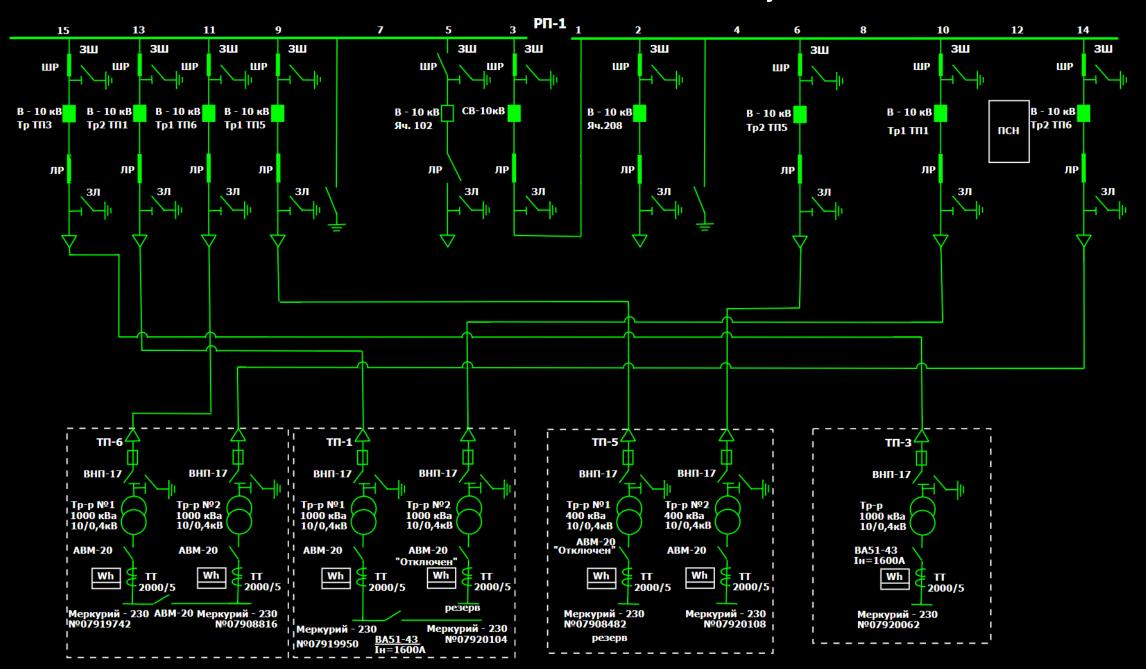

PROGRAMMABLE LOGIC CONTROLLER IRIS

Distributed IO Carrier Module: Modbus TCP, Modbus RTU, YART LINK

10 kV Grid Substation Telemetry

10 kV Grid Substation Telemetry

System Description

Hardware CEREBRUM

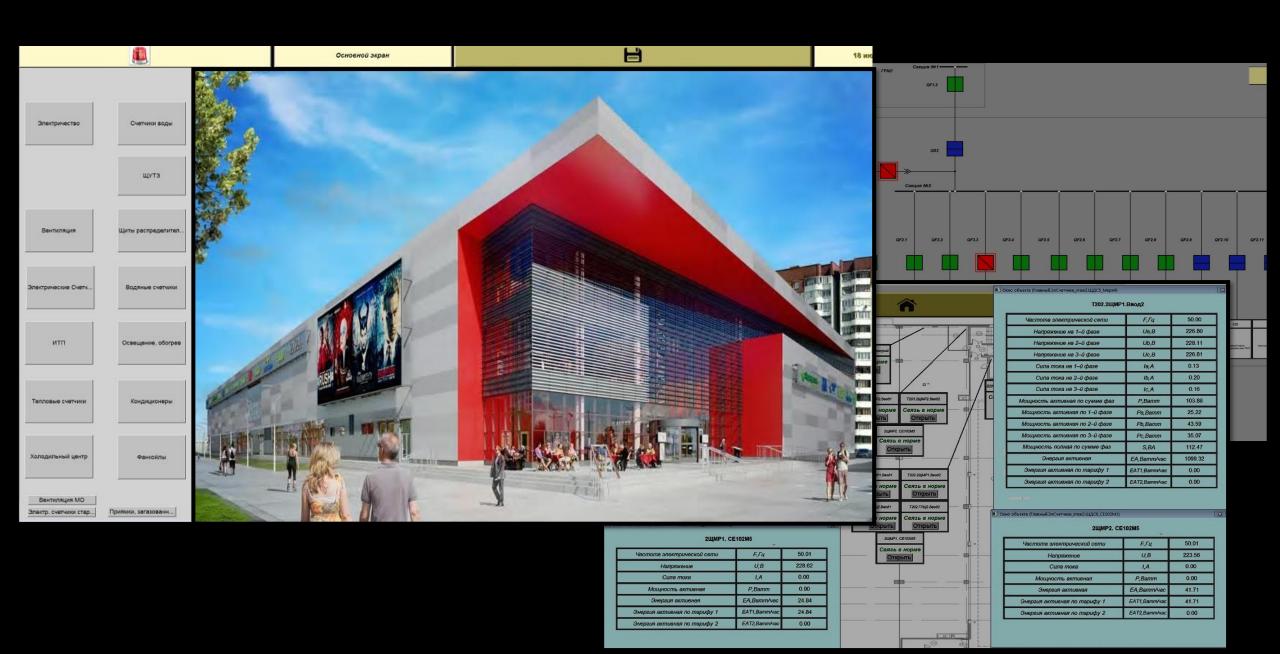

The 10/0.4 kV grid substation telemetry

The CEREBRUM system functions:

- ✓ Switching devices monitoring and protection
- ✓ Energy meters data acquisition
- ✓ Local and global WEB access over the Internet

Hardware	Quantity	Purpose
PLC YART 1.8	1	Status signals gathering and processing, server and local facilities communications
Module 16DI	3	Digital inputs
mySCADA server CerebrumCloud	1	WEB server data indication, access and authentication control, managing telemetry data archives

Shopping Center Electrical Energy Audit

Shopping Centre Electrical Energy Audit

System description

The system is built around the shopping center's energy metering system.

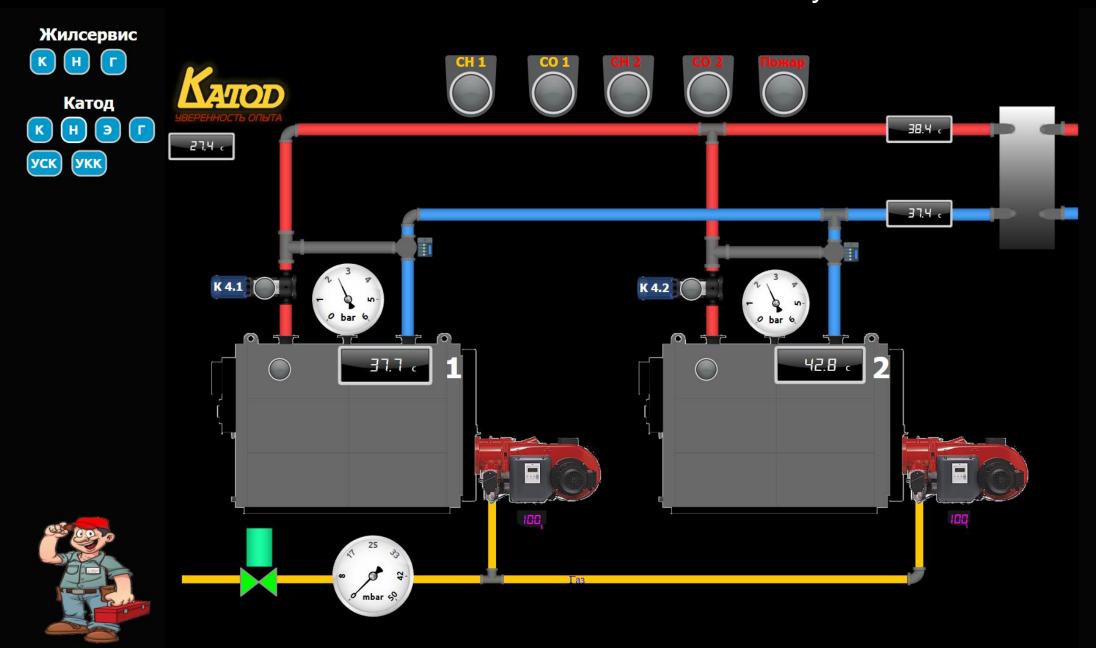

The data is collected by MasterSCADA via Modbus TCP protocol.

The total amount of 147 energy meters are integrated to the system by using just seven Cerebrum PLCs as communication bridges.

CEREBRUM Equipment Used

Hardware	Quantity	Purpose
PLC YART 1.8	7	The energy meters data gathering and processing

Industrial Boiler Automation And Telemetry

Industrial Boiler Automation And Telemetry

System description

CEREBRUM Equipment Used

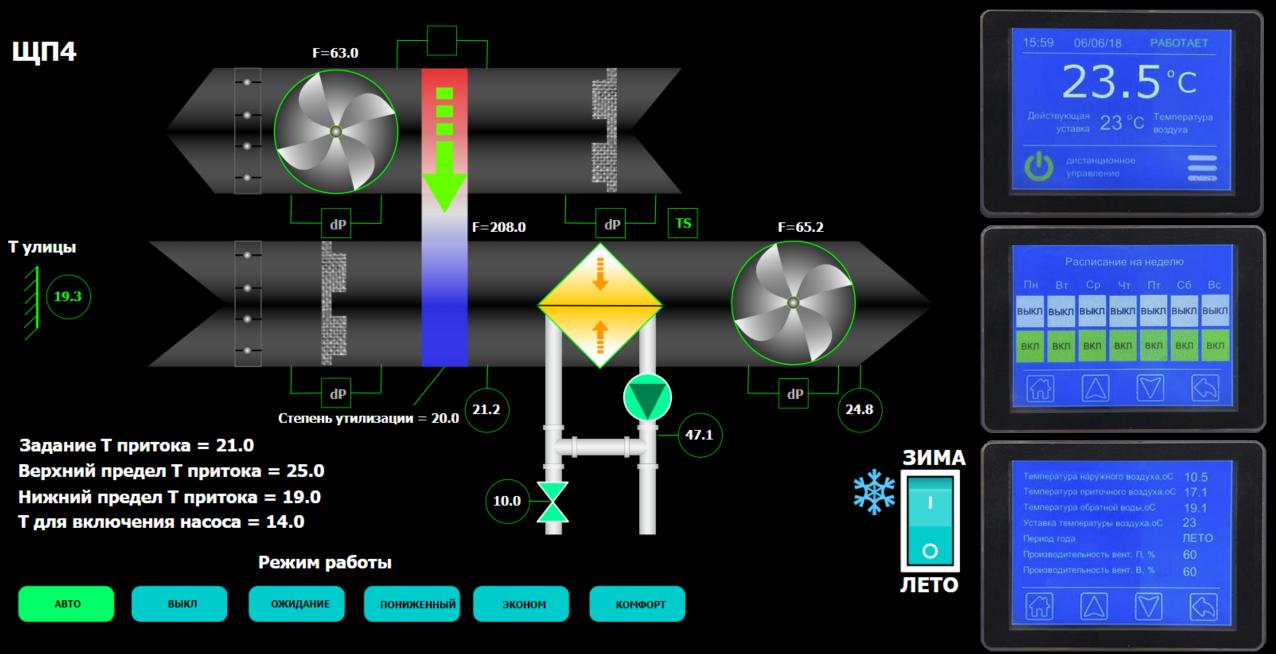

The industrial gas boiler automation has been implemented in Saint Petersburg.

Features

- ✓ PID controller's parameters online auto tuning
- ✓ Heat, energy and water metering devices acquisition
- ✓ Gas leak and safety sensors operations, access control
- ✓ WEB server for local and Internet control and monitoring
- ✓ Map integrated visualization for multiple boilers instances
- Direct boiler control

Hardware	Quantity	Purpose
PLC YART 1.8	2	Feedback signals processing, server data exchange, energy meters communication, control algorithm processing
Module 16DI	1	Digital inputs
Module 16DO	1	Digital outputs
NEURO 3G	1	3G/GPRS data networking services
mySCADA server CerebrumCloud	1	WEB server, access control, data historizing. A single mySCADA server carries up to 50 boilers simultaneously

Educational Building's Ventilation Systems Automation and Telemetry

Educational Building's Ventilation Systems Automation and Telemetry

System description

CEREBRUM Equipment Used

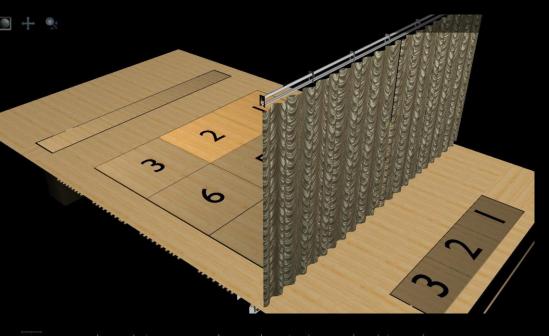

Rotary recuperator equipped HVAC unit control system

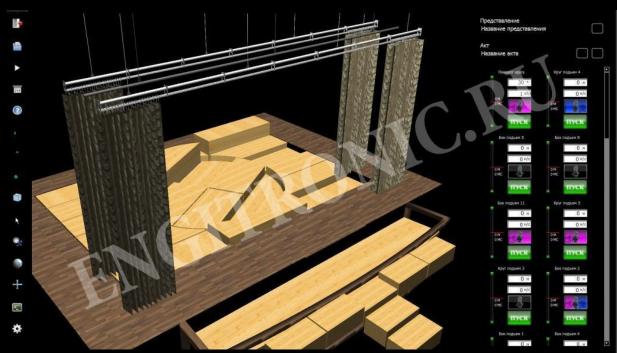

Features

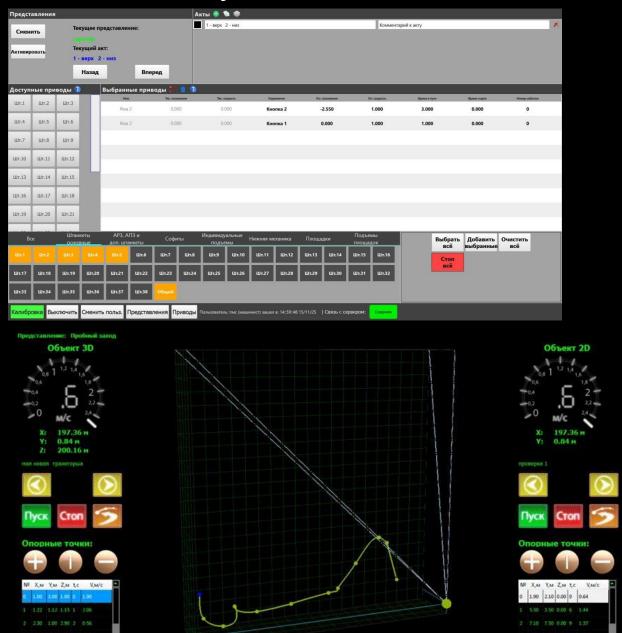

- ✓ Control of ventilation unit
- ✓ Control by schedule
- ✓ PID controller's parameters online auto tuning
- ✓ Faults diagnostics and indication
- ✓ Managing of data exchange with the mySCADA server
- ✓ Data exchange with a local Samkoon console via RS485 interface (Modbus RTU)
- ✓ WEB server for local and Internet control and monitoring

Hardware	Quantity	Purpose
PLC YART 1.8	1	Feedback signals processing, server data exchange, energy meters communication, control algorithm processing
mySCADA server CerebrumCloud	1	WEB server, access control, data historizing. A single mySCADA server carries up to 50 systems simultaneously

Smart Theatre Control And Automaton System

Smart Theatre Control And Automaton System

Hardware CEREBRUM

System description

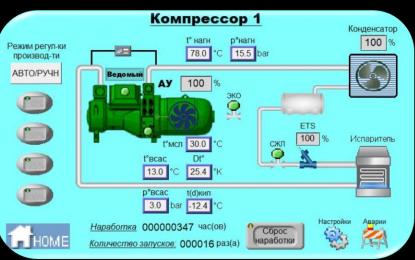

Electric drive control system for stage machinery

CEREBRUM functions:

- ✓ Drive's position and speed control
- ✓ Programmable drives coupling
- ✓ Synchronized control with an 3 mm positioning error
- ✓ Self tuned PID regulators
- ✓ Embedded diagnostic and fault detection features
- ✓ High speed control data transfer
- ✓ Database driven stage layout presets

Hardware	Quantity	Purpose
ПЛК GREEN MOTION	90	Individual control of AC drives. Feedback (encoder) sensor signal processing. Position and speed control Data communications
PLC YART 1.8	3	Processing of digital and analog signals from the operator's consoles
Custom designed software	3	Data visualization, flexible UI for settings, three-dimensional real-time stage indication, automatic drives positioning, operator access control, parameters and user actions logging.

The Ice Rink Liquid Cooling System

System description

The liquid cooling unit controls the temperature of the refrigerant liquid (40% ethylene glycol) in a given range to ensure freezing and keeping ice on the standard hockey ice rink

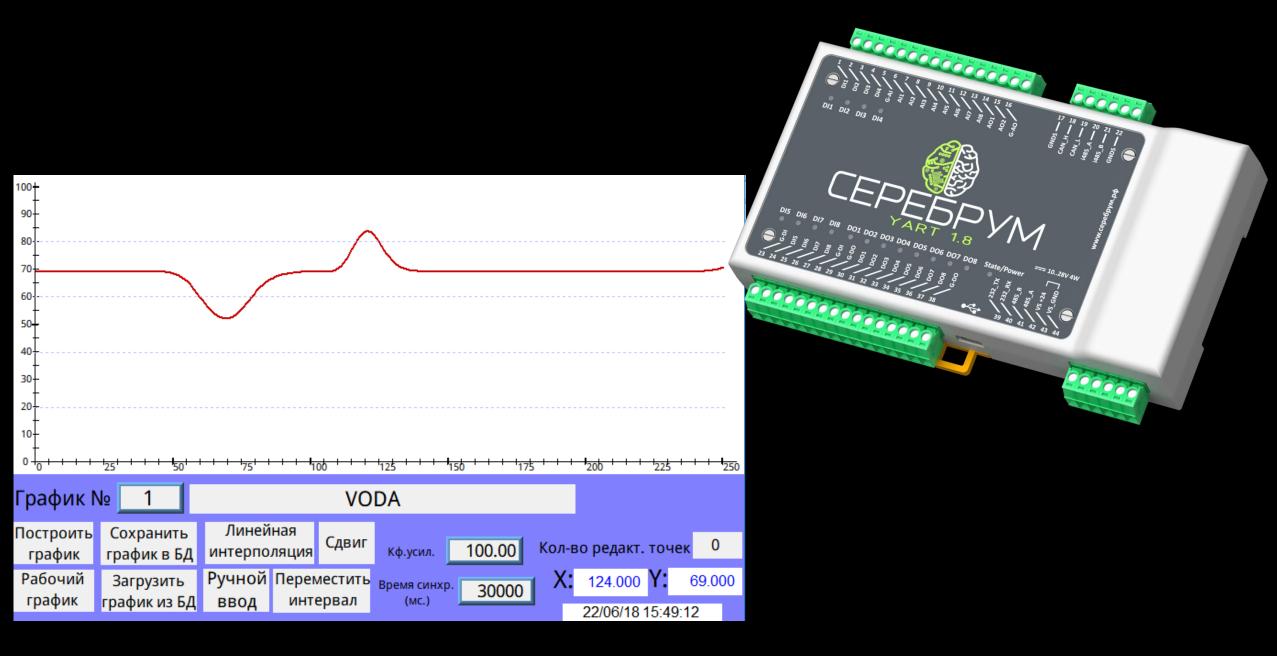

CEREBRUM functions:

- ✓ Provides start-up algorithm, conditions control, maintains the required performance, pumps OFF control (primary and backup).
- ✓ The optimized pressure refrigerant loop control coupled with ice rink basement heating pumps
- ✓ Provides the required compressor's performance using the temperature sensors on the evaporator's inlet and outlet ports
- ✓ Multilevel protection system

Hardware CEREBRUM

Hardware	Quantity	Purpose
PLC YART 1.8	2	Control algorithm
Module 16DI	2	Digital inputs
HMI-panel (Weintek)	1	Data display

Plastic Extruder Control

Plastic Extruder Control

System description

Automated blow molding parison control Managed molding weight distribution

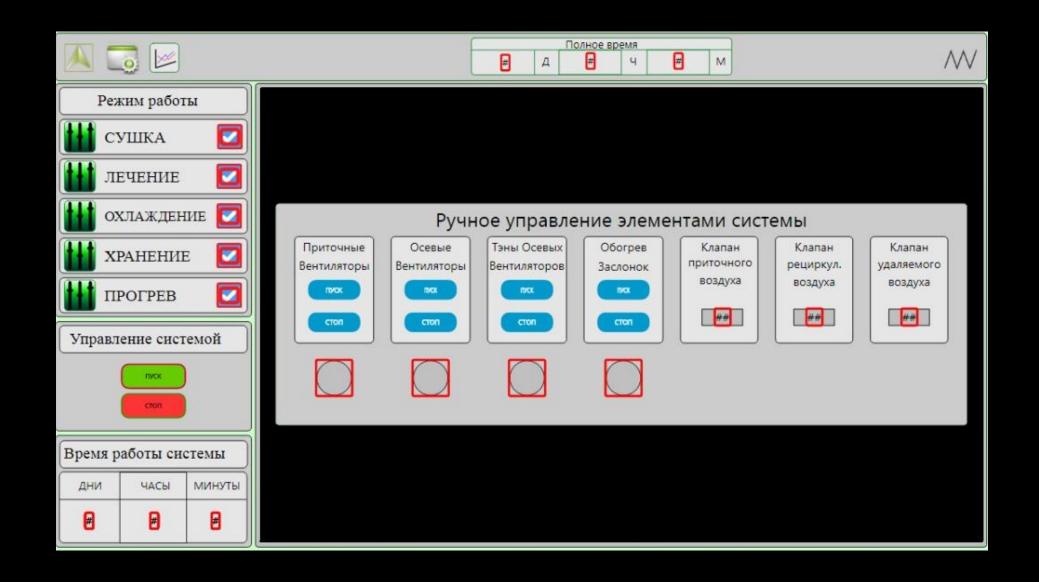

CEREBRUM functions:

- ✓ Blow molding control
- ✓ Extruder PID control
- ✓ High speed sensors processing
- ✓ Data indication

Hardware CEREBRUM

Hardware	Quantity	Purpose
YART 1.8 PLC	1	Control algorithm processing
HMI panel (Weintek)	1	Data indication and interfacing

Vegetable Store Control And Telemetry System

Vegetable Store Control And Telemetry System

System description

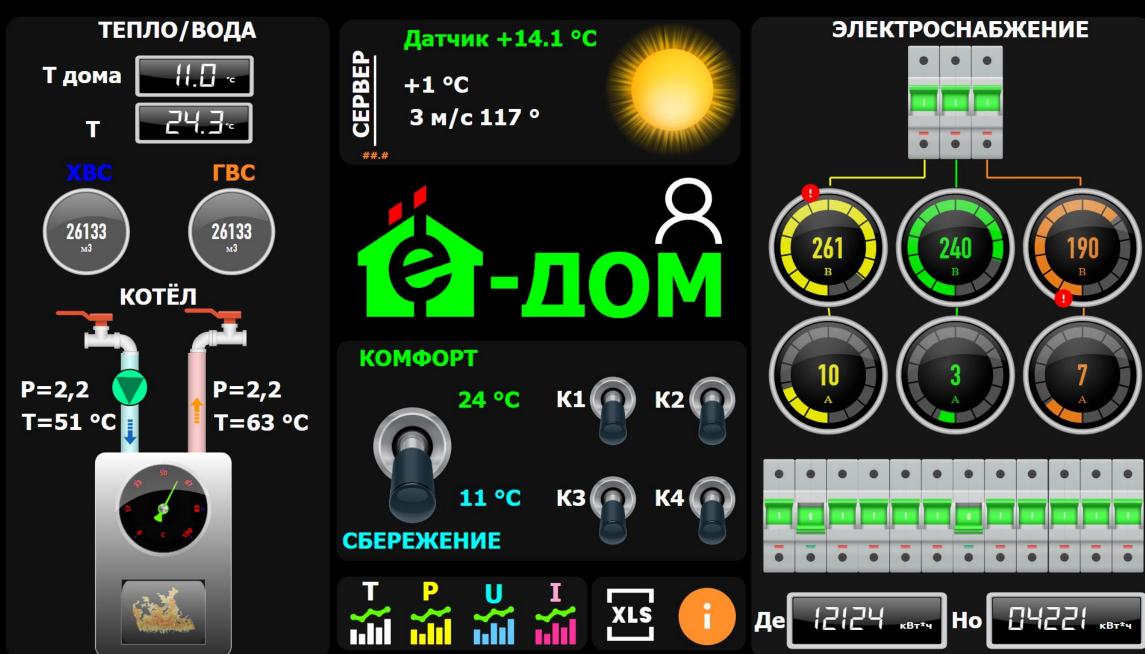

CEREBRUM Automation Functions

- ✓ Automated and manual control modes
- ✓ Scheduled control
- ✓ Prescripted control modes
- ✓ Local network WEB HMI

Hardware CEREBRUM

Hardware	Quantity	Purpose
YART 1.8 PLC	1	Feedback signals processing, server data exchange, control algorithm processing
16DI Expansion Module	1	System IO space expansion
mySCADA Server CerebrumCloud	1	WEB server, access control, data historizing.

ёДом (yoDom), The Remote House Control System

ёДом (yoDom), The Remote House Control System

System description

Private houses system control and telemetry solution designed for efficient heat and electricity consuming.

CEREBRUM Automation Functions

- ✓ Smart multilevel heating control tuned from comfrort to Eco energy consumptions
- ✓ AC grid parameters monitoring and fast protection features
- ✓ In house electricity system state monitoring
- ✓ Programmable ON\OFF channels for more comfort
- ✓ Meters data acquisition
- ✓ Climate control
- ✓ Internet available secured WEB control and monitoring pages

Hardware CEREBRUM

Hardware	Quantity	Purpose
YART 1.8 PLC	1	Feedback signals processing, server data exchange, energy meters communication, control algorithm processing
NEURO 3G	1	3G\GPRS module for remote communications
mySCADA Server CerebrumCloud	1	WEB server data indication, access and authentication control, managing telemetry data archives
